

AI Engineer

About Us

WOGOM is a B2B Commerce and Retail Enablement Platform, empowering 6,000+ retailers and 450+ sellers across India with better Products, Pricing, Credit, and Growth Opportunities. Our goal is to build a connected ecosystem where technology, capital, and commerce converge to help Indian retailers scale with confidence.

Role Overview

The AI Engineer will design, develop, and deploy AI/ML models that drive real business value, focusing on model accuracy and performance. This role will have a direct impact on WOGOM's mission by empowering Indian retailers through technology and innovation. The ideal candidate will bring a unique combination of technical expertise, business acumen, and collaboration skills to the table.

Key Responsibilities

Design, develop, and deploy AI/ML models for real business use cases, with a focus on model accuracy and performance. This will involve working with structured and unstructured data to train and optimize models.

Collaborate with product, engineering, and business teams to understand requirements and integrate models into production systems. This will require strong collaboration and communication skills to ensure seamless integration.

Monitor model performance and improve accuracy over time, with a focus on continuous learning and improvement. This will involve documenting workflows, models, and technical decisions to ensure knowledge sharing and reproducibility.

Develop and deploy AI/ML models that drive significant business value, establishing themselves as a subject matter expert in AI/ML. This will require a strong understanding of machine learning and deep learning fundamentals.

Work with cross-functional teams to understand requirements and integrate models into production systems. This will involve strong analytical and problem-solving skills to identify areas for improvement.

Document workflows, models, and technical decisions, ensuring knowledge sharing and reproducibility. This will require strong communication and documentation skills.

Requirements

Must-Have Skills

Strong understanding of machine learning and deep learning fundamentals, critical for developing accurate models. This will require a solid foundation in mathematical and computational concepts.

Proficiency in Python programming, essential for model development and deployment. This will involve writing clean, efficient, and well-documented code.

Experience with model deployment and real-world AI implementation, vital for integrating models into production systems. This will require a strong understanding of software development principles and practices.

Strong collaboration and communication skills, necessary for working with cross-functional teams. This will involve effective communication of technical concepts to non-technical stakeholders.

Strong analytical and problem-solving skills, required for identifying areas for improvement and optimizing model performance. This will involve a data-driven approach to decision-making.

Nice-to-Have Skills

Experience with TensorFlow or PyTorch, desirable for model development and deployment. This will require a strong understanding of deep learning concepts and frameworks.

Knowledge of SQL and data analysis, useful for working with structured and unstructured data. This will involve a strong understanding of data modeling and database concepts.

Familiarity with APIs and backend integration, beneficial for integrating models into production systems. This will require a strong understanding of software development principles and practices.

Who Will Succeed in This Role

The ideal candidate will be a detail-oriented, strategic thinker with strong analytical and problem-solving skills, who thrives in a fast-paced environment and is passionate about AI and machine learning. They will have a collaborative mindset, with strong communication and documentation skills, and will be committed to continuous learning and improvement.

Success Metrics

Within the first 30 days, develop a thorough understanding of the company's AI/ML landscape and establish relationships with key stakeholders.

Within the first 90 days, deploy a minimum of one AI/ML model into production and achieve a significant improvement in model accuracy.

Within the first 6 months, develop and deploy multiple AI/ML models that drive significant business value, establishing themselves as a subject matter expert in AI/ML.

How to Apply

To apply for this role, please submit your resume and a cover letter explaining why you are a good fit for this position. We look forward to hearing from you and exploring how you can contribute to WOGOM's mission.
